

How to deploy your token on remix

1. Step: Go to

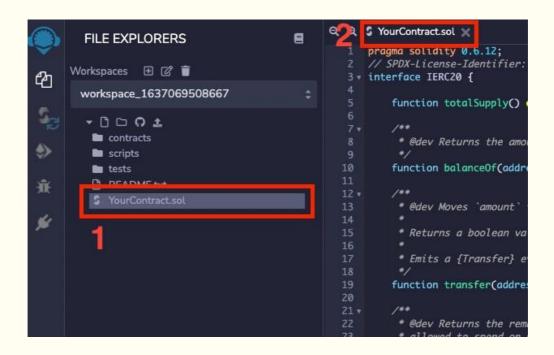

https://remix.ethereum.org/

2. Step: Upload the contract

Make sure the contract ends on .sol,
If it doesn't, right-click on it and rename
it.

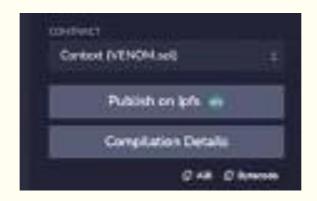

3. Step: Select and open your contract

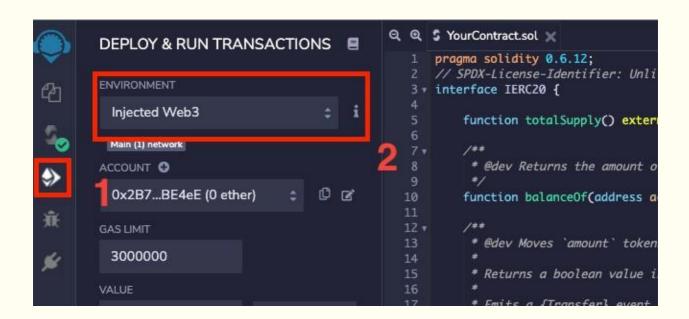

4. Step: Open the solidity compiler, and compile the contract with version 0.8.17:

```
// SADE-Cicense-Edwerster: INCICASED progres solidity 4.8.70
    TOK B
                                                        spatract contract Context if
                                                             function impScreen() internal view virtual returns (selfress) (

Result:

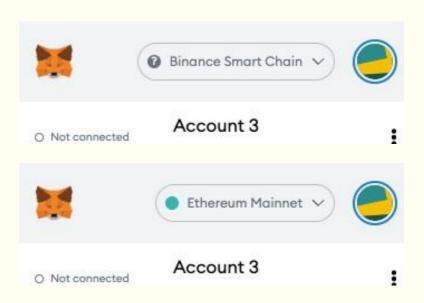

5. Step: Go to deploy -> select Injected Web3 and connect to your Metamask:

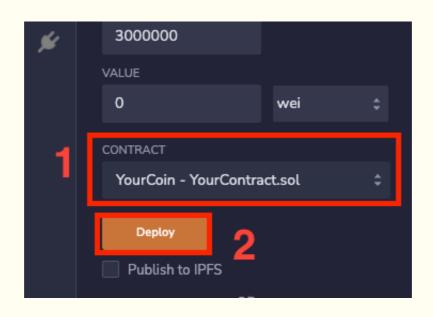

6. Step: Make sure you are connected to the BinanceSmart Chain or Ethereum Mainnet on Metamask

Choose the Network in which you want to deploy the token

7. Step: Select the main contract (e.g. Encircled - Encircled.sol as contract and click on Deploy:

Don't select a sub contract like Address – Encircled.sol

https://www.ethereum.org

Amount - got fee

Estimoted gos fee 8 0.000774 0,000774 ETH

0.003274 0.003774 ETH

Max amounts 0.000074 ETH

8. Click confirm on the pop-up -> Metamask will open -> Click confirm again.

- 9. Wait for the transaction to finish.
- 10. You now have deployed your contract.
